

## Mesh Rolled Ridge Vent Changes the Game

Stocking the building materials preferred by roofing professionals is a key aspect of a **wholesaler's success**. This brand new ridge vent from Air Vent improves the category of mesh rolled ridge vents. Residential roofing contractors, builders and remodelers who currently install standard mesh rolled ridge vents will notice RidgeHawk's differences immediately – and they'll look to **ABC Supply** to buy it. Here's why.

- Double-density edges provide exceptional holding power. This will help reduce compression and dimpling during installation including holding up to nail gun forces. Say goodbye to wavy installs.
- Breathable fabric helps prevent weather, dust and bug infiltration – similar time-tested results with our flagship ShingleVent® II ridge vent's weather filter.
- Netted nylon structure provides more open area for unobstructed airflow. It won't stretch or compress the vent openings that often causes airflow reduction.

RidgeHawk's specs:

- 11 inches wide
- 20-foot roll with nails included
- 15 sq. in. Net Free Area airflow per linear foot
- Provides exhaust ventilation on horizontal ridges and diagonal hips
- Suitable for roof pitches 3/12 to 18/12 (our steepest pitch ever)
- Limited lifetime warranty

Call Customer Service 1-800-AIR-VENT for pricing and availability. For more info: [RidgeHawk](#).

### Upgrade to an Externally Baffled Ridge Vent

If contractors want to use the power of the wind for increased exhaust airflow and weather protection, recommend our externally baffled ridge vents with internal weather filters: ShingleVent II (4-foot rigid vent) and Peak Performer II (28-foot rolled rigid vent). For more information: [ShingleVent II](#); [Peak Performer II](#).
