

Roofing Contractor Helps Homeowner **Cut Energy Bill 25%** -- Thanks to Attic Ventilation

AIRING IT OUT

WITH **AIR VENT**

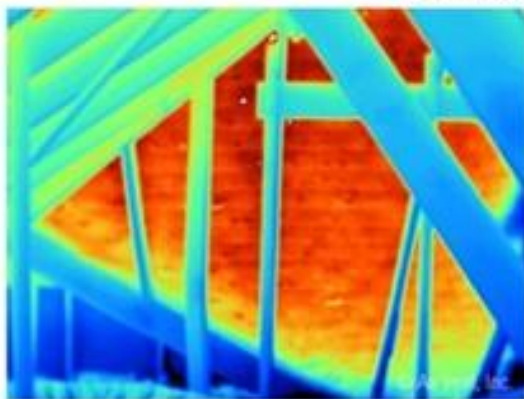

"As I was ready to pull the attic access door open, the homeowner warned me, 'Prepare yourself.' As soon as I opened the attic door it felt like a sauna... I told the homeowner the attic ventilation correction I'm proposing is going to be huge based on what I'm seeing."

In our latest one-on-one podcast interview with Khaled Kazmi, roof specialist, Precision Roof Crafters, Houston, TX, he explains the steps he took to help reduce the homeowner's energy bill 25%. Listen to the entire episode ([Energy Bill Cut 25% Podcast Episode](#)) in which Kazmi details:

- Red flags inside the attic such as sweating HVAC ductwork and blocked intake vents
- Insufficient exhaust vents based on the attic's size
- The homeowner's text message that turned the tables

West Attic North Deck

Before

After

And check out our before and after case study using thermal images. We document the energy savings and temperature differences with and

without balanced attic ventilation in another project ([Thermal Imaging Before & After Case Study](#)).

If you have a topic for a future podcast episode or if you have a potential case study, please drop us a note: Paul Scelsi (pscelsi@gibraltar1.com).
