

# Tips for Venting Complex Roofs

On campus of Air Vent University, we offer tips to help ventilate tricky attics and complex roofs. Recently we tackled gambrel roofs, knee walls, and mansard roofs.

- How do you handle the point where the roof pitch changes from steep eave to shallow top on a [mansard roof](#)?
- If the roof deck is not being replaced, how do you gain access to the [knee wall](#) area?
- If there isn't an airflow channel for the entire [gambrel roof](#), can it be created?

While on campus, take any 5-Question [Pop Quiz](#) and you're automatically eligible to win cool SWAG shipped to you.

Have a complex roof you'd like us to explore in a future AVU Lesson Plan? Have a topic for a future eblast? Send a note to Paul Scelsi ([pscelsi@gibraltar1.com](mailto:pscelsi@gibraltar1.com)).
